up to **65%**
energy savings

Refurbish tunnel lighting

with the SITECO refurbishment solution.
Always suitable. Always sustainable.

Would you like to easily realize savings right away? Then refurbish your lighting now!

Lighting refurbishment as effortless and quick as never before.

Our new LED refurbishment solution for tunnel luminaires is a solution that works for every existing infrastructure. The refurbishment inserts always fit – no matter what luminaire you were using before and without compromising the high SITECO lighting quality.

Achieving sustainability couldn't be easier: the LED refurbishment inserts from SITECO.

Conserves resources and saves money. Refurbishment rather than a new installation: Conserves raw materials. Cost effective. And operating costs drop significantly.

Can be implemented quickly. Cross-manufacturer solution. Simple to mount thanks to adhesive technology. Delivery at short notice.

Protects the environment. Limited use of materials. Lower energy and CO₂ consumption by converting to LED technology.

Are you still using fluorescent lamps?

One more reason to refurbish now! The EU's fluorescent-lamp ban is already in effect – take action now! And high energy prices and government subsidies mean it's worth switching to LEDs – from the very first day onward.

New LED lighting in three steps:

1

Determine available glass surface

2

Select the lumen package

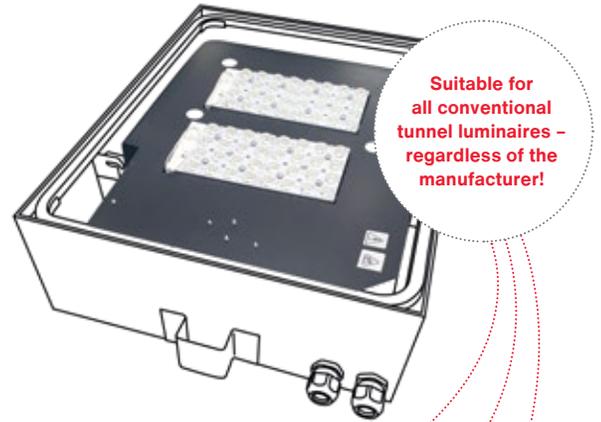

3

Place order and begin using inserts

Refurbishment instead of buying new: Quick, budget-friendly, sustainable.

Checklist for installation of an LED refurbishment insert

- ✓ Conventional luminaires are installed
- ✓ Luminaire housings are ready to use
- ✓ Cabling can still be reused

HPD luminaires

Linear luminaires

Tube luminaires

The best light in the shortest time.
